

E-Commerce Growth Intelligence: A Data Analysis Case Study

Data Analytics Portfolio Project

Harshad Deshmukh

Overview of the Business Challenge

- Shopeasy, a fast-growing online retail platform, is experiencing a decline in customer engagement and purchase conversion rates despite rolling out multiple new digital marketing initiatives.
- **Key Points:**
 - **Declining User Engagement:** Website visits, clicks, and interactions with marketing content have dropped significantly.
 - **Falling Purchase Conversion Rates:** A growing share of site visitors are browsing without completing a purchase.
 - **High Marketing Campaign Costs:** Heavy spending on digital advertising and promotions is not translating into proportional revenue growth.
 - **Customer Feedback Analysis Required:** Analysing customer reviews and feedback is essential to understand pain points and rebuild engagement.

Key Performance Indicators (KPIs)

- **Conversion Rate:** Percentage of website visitors who complete a purchase transaction.
- **Customer Engagement Rate:** Measures how actively users interact with marketing materials across channels (clicks, likes, comments).
- **Average Order Value (AOV):** Average amount spent by a customer per transaction.
- **Customer Feedback Score:** Composite score derived from customer review ratings and sentiment across platforms.

Project Objectives

- **Increase Conversion Rates:**

- **Goal:** Identify factors impacting the conversion rate and provide recommendations to improve it.
- **Insight:** Highlight key stages where visitors drop off and suggest improvements to optimize the conversion funnel.

- **Enhance Customer Engagement:**

- **Goal:** Determine which types of content drive the highest engagement.
- **Insight:** Analyze interaction levels with different types of marketing content to inform better content strategies.

- **Improve Customer Feedback Scores:**

- **Goal:** Understand common themes in customer reviews and provide actionable insights.
- **Insight:** Identify recurring positive and negative feedback to guide product and service improvements.
